EDUCATION

SWAMI RAMA HIMALAYAN UNIVERSITY

Bachelor of Technology (B.Tech) in
Computer Science with AI/ML

2022 – Pursuing

SBM PUBLIC SCHOOL

Senior Secondary (Class 12), PCM
2022 | Percentage : 80%

SBM PUBLIC SCHOOL

Secondary (Class 10)
2022 | Percentage : 72%

CERTIFICATIONS

- Artificial Intelligence / Machine Learning – LinkedIn Learning, 2024
- Data Visualization – Tata Group, 2024

SKILLS

- Python
- Machine Learning , Deep Learning
- Tensorflow , Keras
- Git & Version Control
- Google colab

ACCOMPLISHMENTS

- Published a patent with the Indian Patent Office for a no-code machine learning web application,
- Showcased a Diabetic Retinopathy project using CNN at the Uttarakhand Innovation Summit.
- Runner-up in a hackathon for a CNN-based Brain Tumor Multi-classification project

ABOUT ME

Python Developer with hands-on experience in Machine Learning and Deep Learning, specializing in CNN-based medical image classification projects . Experienced in building end-to-end ML pipelines including data preprocessing, model training, evaluation, and optimization.

PROJECTS

CREATION GROUND (NO-CODE MACHINE LEARNING PLATFORM)

- Built a no-code machine learning web application using Python and Streamlit as a group project.
- Implemented data preprocessing, EDA, model training, and evaluation using scikit-learn in a group-based development setup.
- Deployed the application on Streamlit Cloud and Render, enabling users to download trained models.
- Patent published by Indian Patent Office for “Creation System for Experimentation and Machine Learning” developed as a group project.

BRAIN TUMOR MULTI-CLASSIFICATION USING DEEP LEARNING

- Built a CNN-based deep learning model to classify brain tumor MRI images into multiple classes.
- Used transfer learning with VGG16, including fine-tuning of top layers for better performance.
- Applied image preprocessing and data augmentation to improve model generalization.
- Trained, validated, and evaluated the model using TensorFlow/Keras with standard performance metrics.

DIABETIC RETINOPATHY DETECTION

- Developed a CNN-based Detection model to detect the diabetic retinopathy from retinal fundus images.
- Performed image preprocessing and augmentation to handle class imbalance and improve model generalization
- Trained and evaluated the model using metrics such as accuracy, precision, recall, and confusion matrix
- Optimized model performance through hyperparameter tuning and achieving reliable classification results
